

### Important Information

- I. Value Gold ETF (the "Fund") is a fund listed on the Stock Exchange of Hong Kong Limited ("SEHK"), which aims to provide investment results that closely correspond to the performance of the London Bullion Market Association Gold Price<sup>1</sup>.
- II. The Fund only invests in bullion and may experience greater volatility due to single economic, market or political occurrences when compared to diversified mutual funds or unit trusts.
- III. The Fund has adopted a multi counter and units are traded in HKD, RMB and USD on SEHK. The nature of the multi-counter may make investment in the units riskier than in single counter units or shares of an SEHK listed issuer. Investors without RMB or USD accounts may buy and sell HKD traded units only.
- IV. RMB is not a freely convertible currency and is subject to foreign exchange control policies, as well as repatriation restrictions imposed by the PRC government. Investors whose base currencies of investments are not in RMB should take into account the potential risk of loss arising from fluctuations in value between such currencies and the RMB.
- V. The Fund does not insure its bullion and the Fund and unitholders could suffer a loss if the bullion held by the custodian is lost or damaged.
- VI. As the Fund is not actively managed, the Manager will not adopt a temporary defensive position against any market downturn. Investors may lose part or all of their investment.
- VII. Trading prices of units on the SEHK are subject to market forces and the units may trade at a substantial premium/discount to the net asset value of the Fund.
- VIII. You should not make investment decision on the basis of this material alone. Please read the prospectus for details and risk factors.

# Why gold, Why now?

## Inflation Hedge

- Gold has historically rallied in periods of high inflation.
- In years of higher inflation with over 5%, gold's price has increased over 25% since 1971\*

### Gold's price historically rallied in periods of high inflation (1971-2025)

Average annual return

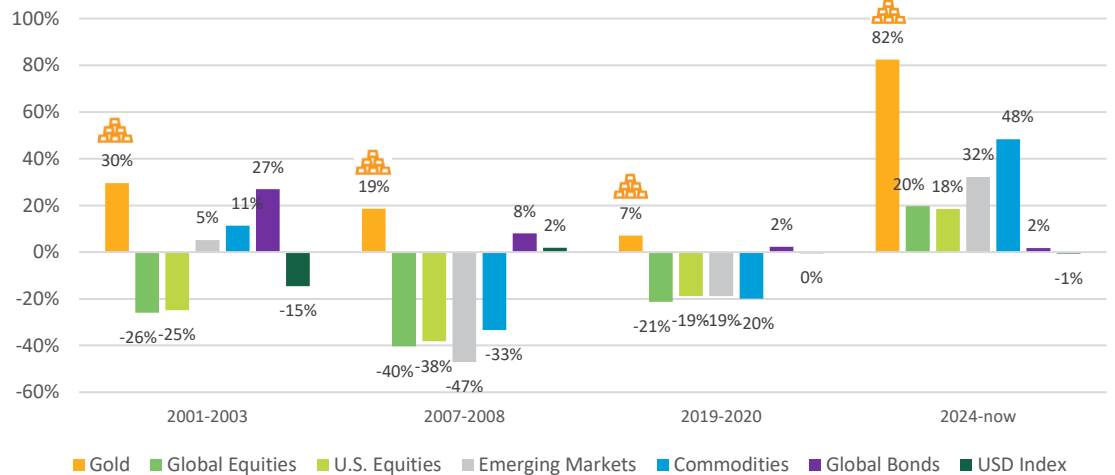

\*Based on y-o-y changes of the LBMA Gold Price<sup>11</sup> and US CPI between 1971 and 2025. From 1971 to 2025, there were 13 years of inflation of less than 2%, 30 years between 2% and 5%, and 11 years of more than 5%.

## During a cycle of interest rate cuts, gold generally performs well

- Gold has outperformed various asset classes during past interest rate cut cycles. Falling interest rates reduce the opportunity cost of holding gold, attracting more investors to allocate gold into their portfolio.
- Interest rate cuts are often accompanied by rising inflation expectations, increasing demand for gold as an inflation hedge, and this is why gold usually outperform stocks, bonds and other asset classes during interest rate cuts cycles.

## Support From Global Central Banks

- In the recent report by the World Gold Council (WGC), central banks bought a record amount of gold from 2022 to 2025.
- Gold remains a good hedge against inflation and heightened geopolitical risks, especially when great nations collide. Unlike currencies whose supply is influenced by monetary policies, gold is a finite physical commodity. That is one of the reasons why global central banks buy gold in bulk, as the asset class helps diversify their reserves. Value Gold ETF holds physical gold bars in Hong Kong, eliminating investment risks from geopolitical events or foreign policies, which helps investors achieve risk diversification.
- It is expected that central banks, especially emerging market ones, will continue to diversify their reserve with gold being one of the most favored asset during periods of high inflation.

## Why invest in Value Partners, Value Gold ETF?

### 1 The world's first gold ETF with a physical depot in Hong Kong

- Value Gold ETF holds physical gold bars in the HKIA Precious Metals Depository, which allows redemption of gold bullion<sup>1</sup> (through a Participating Dealer that allows physical gold delivery: Redford Securities Limited), reducing geopolitical risks.

### 2 "Outstanding Performance" ETF<sup>2</sup>

- The Value Gold ETF is the world's first gold ETF that provides HKD, RMB and USD trading counters. It is a multi-award-winning product<sup>3</sup> with a solid track record since 2010.

### 3 Transparency, Convenience and Affordability

- The amount of gold storage, price, and net asset value (NAV) are disclosed daily.
- Value Gold ETF is more cost-effective generally than buying and storing physical gold bullions
